

VEDA – perhaps the most advanced and secure system of data transmission in the world.

### VEDA's mission

Protection and transmission of any valuable information in digital form.

#### Problem

NO ONE can be trusted on the Internet.

What is the most important information on the Internet, for you:

- + Health
- + Business
- + Finance

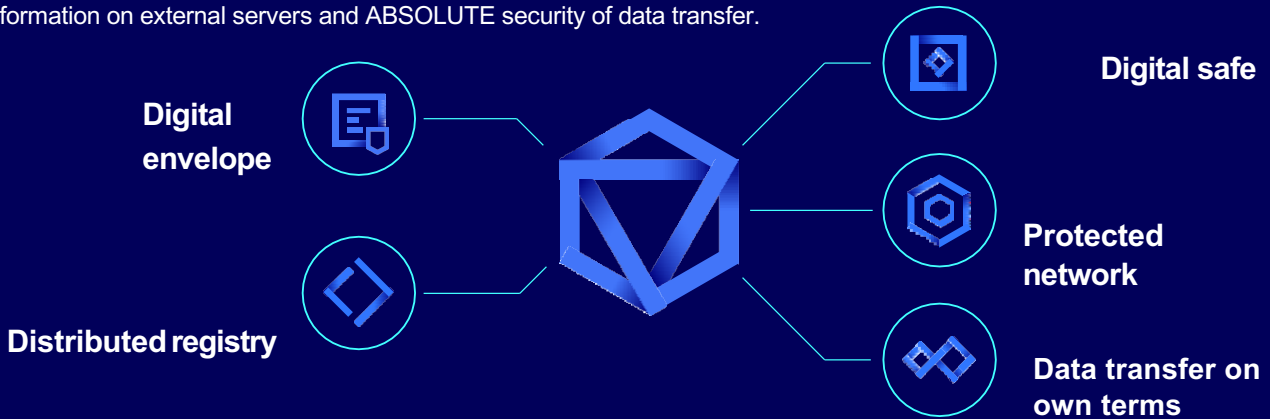

The value of digital information in the modern world is highly important.

VEDA created a unique secure data transfer system. The world's first system that allows you NOT TO STORE information in the servers in the Internet

- + Hackers stole more than \$523 000 000 from Coincheck, Japan's largest exchange, due to an imperfect information security system
- + Most of the data transfer services store information in an open and unprotected form. For example Facebook, Yandex

### VEDA's technology

VEDA created a unique technology for secure data transfer, allowing you to control the transmission of information on the Internet. The main advantage of VEDA in working with the TECHNOLOGY of information transfer: NO storage of information on external servers and ABSOLUTE security of data transfer.

### Protection of personal information in VEDA system

There is no possibility to gain unauthorized access to the data.

Your information is protected as well as the state confidences.

The information, transmitted and stored by users, is located only on the senders' and recipients' devices.

### Products

ENSURE COMPLETE SECURITY and PRIVACY to your data and the data of your BUSINESS. VEDA can work with any information. To confirm the effectiveness of the technology, we have created an Email client that changes the EXPERIENCE on confidentiality and methods of data transfer and storage

THE FUTURE of Information Transfer is VEDA.
